DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitation "one of said radial surfaces is treated to increase its co-efficient of friction" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3748

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 4-8 and 10-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamazaki et al. Yamazaki et al teaches a turbocharger comprising a turbine wheel 2 mounted to a first end of a shaft 4 for rotation within a turbine housing 1, and a compressor wheel 3 mounted to a second end of the shaft 4 for rotation within a compressor housing, the compressor wheel 3 having an axial through bore extending between a first end of the wheel 3 and a second end of the wheel 3, said second end being remote from said turbine 2, wherein the second end of the shaft 4 extends through the bore and a short distance beyond the second end of the compressor wheel 3 and a nut 8 is threaded onto said second end of the shaft 4 to apply a clamping force to the compressor wheel 3 either directly, or indirectly through an intermediate clamping member 9 disposed around said shaft 4 adjacent the second end of the compressor wheel 3, such that the second end of the compressor wheel 3 has a radial surface contacting a radial surface of the nut or intermediate clamping member 9, and wherein at least one of said radial surfaces is treated 10 to increase its co-efficient of friction with respect to the other surface. With reference to claims 2, 12 and 14, see Fig. 6c of Yamazaki et al.

Allowable Subject Matter

4. Claims 3 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
